## ANSWERS TO BELOW QUESTIONS ARE

```
1.C 2. D 3.A 4.D 5.A 6.C 7.C 8.C 9.B 10.A
11.D 12.C 13.B 14.A 15.D 16.D 17.D 18.C 19.D 20.D
```

```
1 What will be the output of the following code snippet?
def func(a, b):
return b if a == 0 else func(b % a, a)
print(func(30, 75))
a) 10
b) 20
                      Answer 1 = C
c) 15
d) 0
2 numbers = (4, 7, 19, 2, 89, 45, 72, 22)
sorted_numbers = sorted(numbers)
even = lambda a: a % 2 == 0
even_numbers = filter(even, sorted_numbers)
print(type(even_numbers))
a) Int
b) Filter
c) List
d) Tuple
             ANSWER 2=D
3) As what datatype are the *args stored, when passed into
           ANSWER 3 = A
a) Tuple
b) List
c) Dictionary
d) none
4) set1 = \{14, 3, 55\}
```

set2 = {82, 49, 62}

c)unchangeable
d) none
10)
The $\underline{}$ is a built-in function that returns a range object that consists series of integer numbers, which
we can iterate using a for loop.
A. range() ANSWER 10 = A
B. set()
C. dictionary{}
D. None of the mentioned above
Question 11
Amongst which of the following is a function which does not have any name?
A. Del function
B. Show function
C. Lambda function
D. None of the mentioned above ANSWER 11 =D
Question 12
The module Pickle is used to
A. Serializing Python object structure
B. De-serializing Python object structure
C. Both A and B ANSWER 12 = C
D. None of the mentioned above
Question 13
Amongst which of the following is / are the method of convert Python objects for writing data in
a binary file?
A. set() method
B. dump() method ANSWER 13 =B
C. load() method
D. None of the mentioned above
14
Amongst which of the following is / are the method used to unpickling data from a binary file?

```
A. load()
                                  ANSWER 14 = A
B. set() method
C. dump() method
D. None of the mentioned above
15.
A text file contains only textual information consisting of ____.
A. Alphabets
B. Numbers
                                          ANSWER 15 =D
C. Special symbols
D. All of the mentioned above
16
Which Python code could replace the ellipsis (...) below to get the following output? (Select all
that
apply.)
captains = {
"Enterprise": "Picard",
"Voyager": "Janeway",
"Defiant": "Sisko",
                                    ANSWER 16 = D
}
Enterprise Picard,
Voyager Janeway
Defiant Sisko
a) for ship, captain in captains.items():
print(ship, captain)
b) for ship in captains:
print(ship, captains[ship])
c) for ship in captains:
print(ship, captains)
d) both a and b
17)
```

Which of the following lines of code will create an empty dictionary named captains?

```
a) captains = {dict}
b) type(captains)
c) captains.dict()
                            ANSWER 17 = D
d) captains = {}
18) Now you have your empty dictionary named captains. It's time to add some data!
Specifically, you want to add the key-value pairs "Enterprise": "Picard", "Voyager": "Janeway",
and "Defiant": "Sisko".
Which of the following code snippets will successfully add these key-value pairs to the
existing captains dictionary?
a) captains{"Enterprise" = "Picard"}
captains{"Voyager" = "Janeway"}
captains{"Defiant" = "Sisko"}
b) captains["Enterprise"] = "Picard"
captains["Voyager"] = "Janeway"
captains["Defiant"] = "Sisko"
c) captains = {
                                                      ANSWER 18 = C
"Enterprise": "Picard",
"Voyager": "Janeway",
"Defiant": "Sisko",
}
d) None of the above
19) You're really building out the Federation Starfleet now! Here's what you have:
captains = {
"Enterprise": "Picard",
"Voyager": "Janeway",
                                               ANSWER 19 = D
"Defiant": "Sisko",
"Discovery": "unknown",
Now, say you want to display the ship and captain names contained in the dictionary, but you
also
want to provide some additional context. How could you do it?
a) for item in captains.items():
```

```
print(f"The [ship] is captained by [captain].")
b) for ship, captain in captains.items():
print(f"The {ship} is captained by {captain}.")
c) for captain, ship in captains.items():
print(f"The {ship} is captained by {captain}.")
d) All are correct
20)
You've created a dictionary, added data, checked for the existence of keys, and iterated over it
with
a for loop. Now you're ready to delete a key from this dictionary:
captains = {
"Enterprise": "Picard",
"Voyager": "Janeway",
"Defiant": "Sisko",
"Discovery": "unknown",
}
What statement will remove the entry for the key "Discovery"?
a) del captains
b) captains.remove()
c) del captains["Discovery"]
                                                   ANSWER 20 = D
d) captains["Discovery"].pop()
```
